

SCHOOL ERP — WEB vs APPLICATION CHART FLOW

Which panel runs on Web, which is a Mobile Application, and how everything connects

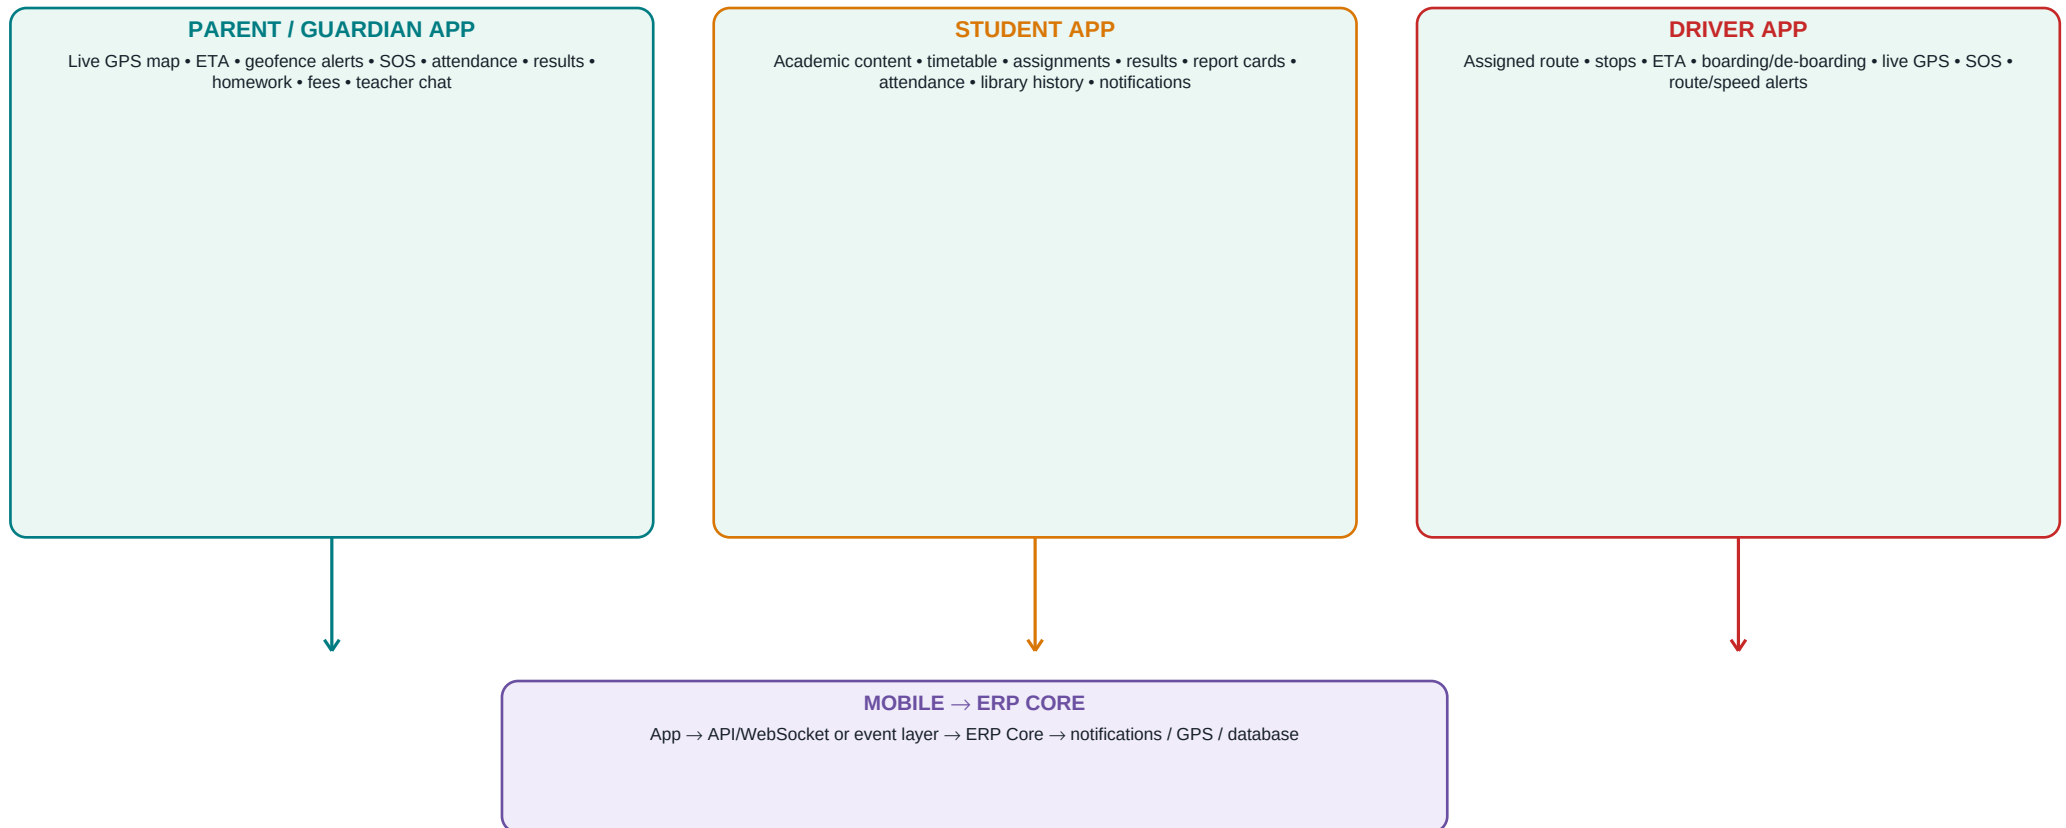

WEB APPLICATION — PANEL STRUCTURE

Recommended web-side structure from the PRD's role-based panels

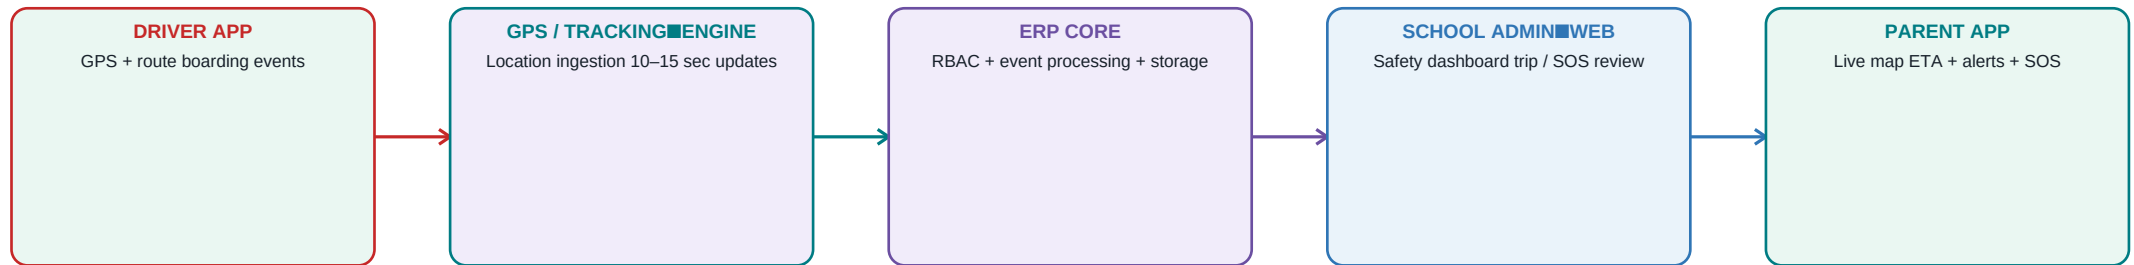

MOBILE APPLICATIONS — PANEL STRUCTURE

Mobile apps are used where real-time, on-the-go access is important

LIVE GPS — COMPLETE APPLICATION FLOW

Driver App → GPS Engine → ERP Core → Parent App / Admin

Event examples: live location • boarding/de-boarding • geofence entry/exit • route deviation • speed alert • SOS

MODULE → WHERE IT IS USED

Quick development map for deciding Web vs Mobile responsibilities

Academic Management

Web: Admin, Teacher | App: Student, Parent

Student Management

Web: Admin, Teacher | App: Student, Parent

Attendance

Web: Admin, Teacher | App: Student, Parent

Examination

Web: Admin, Teacher | App: Student, Parent

Fees

Web: Admin, Accountant | App: Parent

Library

Web: Librarian, Admin | App: Student

Transport

Web: Admin | App: Driver, Parent

Live GPS & Safety

Web: Admin | App: Driver, Parent

Communication

Web: Admin, Teacher | App: Parent, Student

HR & Payroll

Web: Admin, HR

Reports & Analytics

Primarily Web: Admin, Accountant, HR, Librarian, Transport

System Settings / RBAC

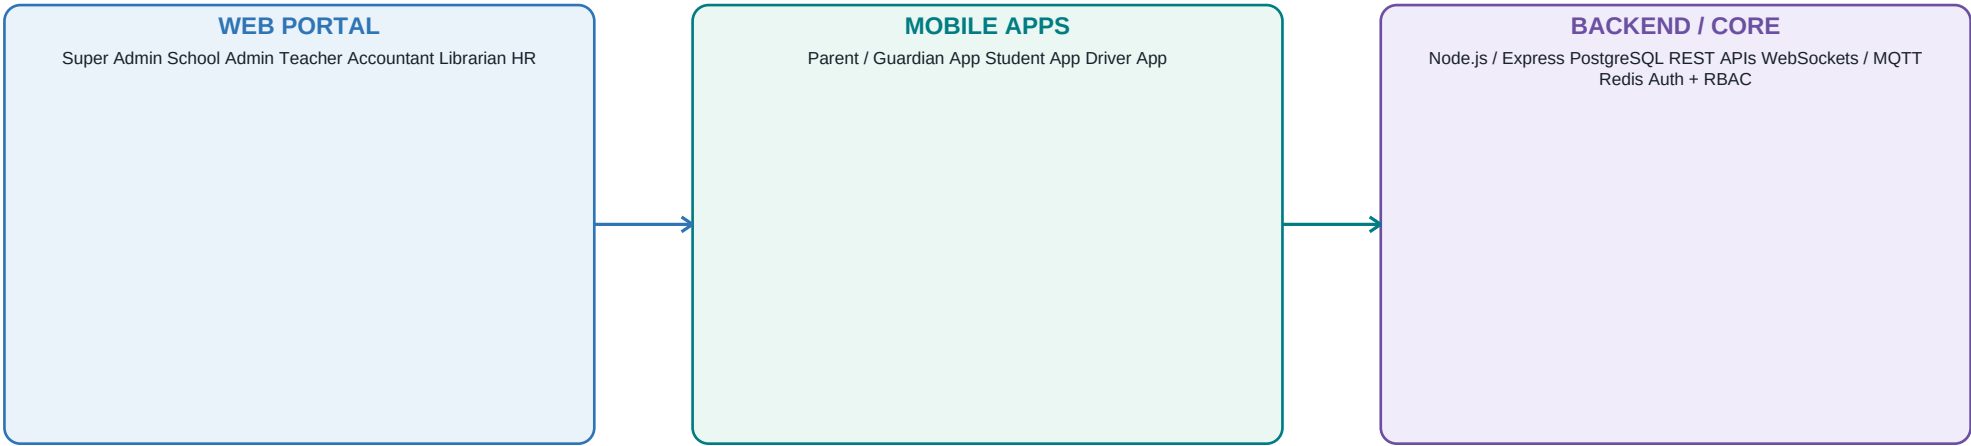

Web: Super Admin / Admin

NOTE

The exact screen-by-screen split can be finalized during UI/UX and RBAC design.

FINAL PRODUCT STRUCTURE

Simple view for the development team

ONE ERP CORE • MULTIPLE ROLE-BASED INTERFACES

Web = management / administration / professional workflows

Mobile = parent, student and driver on-the-go workflows + real-time safety

All interfaces connect to the same ERP Core, database, RBAC and notification system.
